

LAPTOP
LUNCHES
bento-ware for everywhere

December 13, 2007

The presence of lead and other heavy metals in children's products, such as toys, jewelry, and even lunchboxes, has received much media attention in recent weeks. In an effort to inform consumers about which products are safe and which are not, various organizations have been testing products and posting the results on the Internet.

Unfortunately, for a short time last week, the Laptop Lunches carrying case was erroneously included among a list of products that had tested positive for lead.

Health and environmental safety are central to our mission here at Obentec, and we assure you that Laptop Lunches have been thoroughly tested by two independent labs in California and were found to be FREE OF THE FOLLOWING: LEAD, MERCURY, ARSENIC, CADMIUM, ANTIMONY, and TIN.

We apologize for any confusion this has caused, and we thank you for your continued support and trust.

Please feel free to contact us with any questions you may have.

Sincerely,

Amy Hemmert & Tammy Pelstring, co-founders
Obentec, Inc.
